

## JENSEN CleanTech

The seamless laundry concept  
with the energy-saving gas dryer

## Senking DT 60-240 Gas

with the RecoCross integrated heat exchanger.

The gas-operated Senking dryer can achieve the most thermally efficient performance with the use of the infrared control and the RecoCross heat exchanger. The infrared control regulates the directed energy supply to the linen in order to avoid unnecessary over-heating and wearing of the linen. In the RecoCross heat exchanger, the energy of hot dryer exhaust air is used to pre-heat the fresh incoming air.

### Advantages:

- Reduction in energy losses and costs created through centralized steam generation and distribution; i.e. up to 35% higher energy efficiency than steam operation
- Reduction in local energy consumption of up to 35% using the integrated RecoCross and infrared control; i.e. up to 0.2 kWh/kg of linen in the full drying process
